

InSight Telepsychiatry

Meet HASC Endorsed Partner InSight

One of two HASC telehealth partners, InSight Telepsychiatry is a leading national telepsychiatry service provider with a mission to transform access to behavioral health care through innovative applications of technology. InSight has two decades of experience, serves hundreds of organizations, and is positioned to offer scalable telepsychiatry services in settings across the continuum of care.

Telepsychiatry in the ED

InSight's telepsychiatry providers integrate into your emergency department and are available 24/7/365 to conduct psychiatric assessments, follow-ups, consults and ongoing care to expand the psychiatric capacity of your organization. After connecting for a video session and performing a psychiatric exam, the remote provider collaborates with onsite resources to jointly determine appropriate disposition. Documentation is completed within your EHR and the InSight provider can serve as a consultant or prescribe medication directly depending on the needs and preferences of the individual hospital. On-demand telepsychiatry services can also be delivered to med/surg floors.

Telepsychiatry for Inpatient Units

InSight's telepsychiatry services can be used to support an inpatient medical setting for weekend rounding, unit crises response, or after-hours admission services including review and approval of admissions and entry of orders for new admissions. InSight will provide designated telepsychiatry providers to perform these duties in your psychiatric unit. Inpatient staff has access to the telepsychiatry providers just as if they were onsite providers of the hospital.

Telepsychiatry in the Community

Telepsychiatry represents unprecedented care for underserved communities and enables individuals to have access to quality, timely behavioral health care even outside of the hospital setting. By implementing telepsychiatry in community settings such as mental health centers, primary care offices and in-home care, individuals have avenues to receive preventative and follow-up care that reduce readmissions and eliminate care silos. InSight's direct-to-consumer division, Inpathy, can also be a great referral option for individuals moving from the hospital to community-based care or a home environment.
